No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein search, using

Patent No. US20020160532A1
GENERAL INFORMATION:
APPLICANT: Jackowski, George
TITLE OF INVENTION: BIDPOLYMER MARKER INDICATIVE OF DISEASE STATE HAVING A MOLECUI
TITLE OF INVENTION: OF 1998 DALTONS
FILE REFERENCE: 2132.013
CURRENT APPLICATION UNMBER: US/09/846,346
CURRENT FILING DATE: 2001-04-30
NUMBER OF SEQ ID NOS: 1
SOFTWARE: Patentin version 3.1
SEQ ID NO 1
LENGTH: 17
TYPE: PATENTIAL US/09/846,346

C;Comment: C3a anaphylatoxin is a vasoactive peptide and a mediator of inflammation. C;Comment: C3b, with its highly reactive thiol group, binds to the surface of foreign e classical-complement-pathway C3/C5 convertase. The activity of C3b is regulated by C;Comment: The major site of synthesis of this plasma protein is the liver.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags cf or identifying expressed genes. (I) is useful in gene therapy techniques ct restore normal activity of (II) or to treat disease states involving contributed and production of treat disease states involving contributed and product and its binding partners are useful in medical contributed as a food supplement. (II) and its binding partners are useful in medical contributed as a food supplement. (II) and its binding partners are useful in medical contributed as a food supplement. (II) and its binding partners are useful in medical contributed as a food supplement. (II) and its binding partners are useful in medical contributed in the polynection of states expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. (CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations in CC diagnostics, forensics, gene mapping, identification of mutations and contributed sequences of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed content in the printed content in the printed content in the content of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 γ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cc pathway proteins (by superactivation until one or more compenents are carbonic exhausted), specifically to prevent rejection of foreign material cc (particularly a xenograft) but also to prevent complement-mediated cc diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous cc complement protein conversion and deposition at a specific site (e.g. a cvirus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating cc complement or cells left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or contemplated by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1304
                                                                                                                                                                                                                                                                                                                                                                          Human: C3 protein; convertase; complement pathway protein; infection; down-regulation resistant C3 convertase; xenograft rejection; therapy complement-mediated disease; autoimmune disease; leukaemia cell; tumo complement-mediated response; MHC-mismatched lymphocyte; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          09-APR-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft
                                                                                                                              WO9732981-A1
                                                                                                                                                                                                                            Misc-difference

This protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC diseases resulting from (surgical) injury or antibody-antigen interaction CC diseases resulting from (surgical) injury or antibody-antigen interaction CC in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a Virus, infected cell or tumour, to increase sensitivity to complement mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or CC inhibited by factor I, it can bind repeatedly to factor B (which is then CC consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş

This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the compensation, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement mediated responses; a particular application is eliminating CC any cancer cells left after surgical removal of a tumour). Also CC contemplated is ex vivo treatment, especially by passing blood through a CC matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or CC MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not CC inathited by factor I, it can bind repeatedly to factor B (which is then can sumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            19-NOV-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inabilited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that fragments and conjugates are used to deplate levels of complement exhausted), specifically to prevent rejection of foreign material diseases resulting from (surgical) injury or antibody-antigen interaction complement protein conversion and deposition at a specific e.g. a complement protein conversion and deposition at a specific (e.g. a complement protein conversion and deposition at a specific conversion and deposition at a specific conversion and deposition at a specific site (e.g. a complement mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a tumour). Also contemnnated is av vivo treatment sensorially, by massing blood them.

C3 is a complement pathway protein that is suceptible to cleavage by Factor I and is also susceptible to the inhibitory action of Factor H. Mutants of C3 (AAR94029 and AAR94030) have been produced by site-directed mutagenesis. These mutants can be used to super-active the complement system, or to induce localised super-activation at a specific target to increase the target's sensitivity to complement-mediated destruction.
                                                                                                                                  Human modified C3 (R1303X).

It is obtained by site-directed mutagenesis of C3-encoding cDNA (AAR17738). The modification results in improved resistance to cleavage by Factor I in comparison to wild-type C3. This allows the modified C3 to be used therapeutically to super-active the complement system or the increase a target's (e.g. tumour, pathogen or virus-infected cell) sensitivity to
                                                                                                                                                                            1304

It is obtained by site-directed mutagenesis of C3-encoding cDNA (AAT17738). The modification reduces the interaction of C3b/C3i with Factor H in comparison to wild-type C3. This allows the modified C3 to be used therapeutically to super-active the complement system or the increase a target's (e.g. tumour, pathogen or virus-infected cell) sensitivity to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;

                                                                                                                                                                                                                                                                                    This sequence represents a mutated human C3 protein of the invention C2 (see AAM34606 for wild type protein). This protein is a protein of the C3 invention, and is a modified native complement pathway protein (A) that C4 forms a down-regulation resistant C3 convertaese. (A), their variants, C5 capathway proteins (by superactivation until one or more complement C4 exhausted), specifically to prevent rejection of foreign material C5 diseases resulting from (surgical) injury or antibody-antigen interaction C6 diseases resulting from (surgical) injury or antibody-antigen interaction C7 complement protein conversion and deposition at a specific site (e.g. a complement protein conversion and deposition at a specific site (e.g. a complement mediated responses; a particular application; beliminating C6 contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a cand other inflammatory mediators) or killing of leukaemia cells or inhibited by factor I, it can bind repeatedly to factor B (which is then C6 consumption of factor B.

CC This sequence represents a mutated human C3 protein of the invention C3 (see AAW34606 for wild type protein). This protein is a protein of the CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a cand other inflammatory mediators) or killing of leukaemia cells or CC MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not consumption of factor B.

CC consumption of factor B.

```
CC (see ANW34606 for wild type protein). This protein is a protein of the convention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction CC in autoimmune disease, also to localise and/or amplify endogenous CC complement mediated responses; a particular application is site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application. Also CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is extracted bone marrow. Since (A) is not cinhibited by factor I, it can bind repeatedly to factor B (which is then CC consumption of factor B.

AAW34627
        This sequence represents a mutated human C3 protein of the invention C3 (see AAW34606 for wild type protein). This protein is a protein of the C4 invention, and is a modified native complement pathway protein (A) that C5 crowstrase. (A), their variants, C6 fragments adom-regulation resistant C3 convertase. (A), their variants, C7 crowstrase. (A) their variants, C8 crowstrase. (A) their variants, C9 pathway proteins (by superactivation until one or more components are C9 pathway proteins (by superactivation until one or more components are C9 crowstrased), specifically to prevent rejection of foreign material C9 (particularly a xenograft) but also to prevent complement-mediated C9 (complement protein conversion and deposition at a specific site (e.g. a C9 complement protein conversion and deposition at a specific site (e.g. a C9 complement protein conversion and deposition at a specific site (e.g. a C9 complement protein conversion and deposition at a specific site (e.g. a C9 complement protein conversion and deposition at a specific site (e.g. a C9 complement protein conversion and deposition at a specific site (e.g. a C9 complement protein conversion and deposition at a specific site (e.g. a C9 complement protein conversion and deposition at a specific site (e.g. a C9 complement protein conversion and deposition at a specific site (e.g. a C9 contemplated sell of the conversion and deposition at a specific site (e.g. a C9 contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anabhylactic peptides and other inflammatory mediators) or killing of leukaemia cells or C9 contemplated by factor I, it can bind repeatedly to factor B (which is then can consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S

               This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19-NOV-1996;

Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inactivated by factor I, it can bind repeatedly to factor B (which is ther inactivated), causing inactivation of the alternative pathway by
                                                                                                                                                                                                                                                                                                      04-MAR-1997;

This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement

cc (see AAW34606 for wild type protein). This protein is a protein of the cinvention, and is a modified native complement pathway protein (A) that cc forms a down-regulation resistant C3 convertase. (A), their variants, cc fragments and conjugates are used to deplete levels of complement complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material comparative proteins protein complement complement—mediated cc diseases resulting from (surgical) injury or antibody-antigen interaction cin autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement—mediated responses; a particular application is eliminating can y cancer cells left after surgical removal of a tumour). Also cc matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inactivated), causing inactivation of the alternative pathway by consumption of factor B.

ITS PROCESSING BY C3 CONVERTASE IS THE CENTRAL REACTION IN BOTH CLASSICAL AND ALTERNATIVE COMPLEMENT PATHWAYS. AFTER ACTIVATION C3B CAN BIND COVALENTLY, VIA ITS REACTIVE THIOLESTER, TO CELL SURFACE CARBOHYDRATES OR IMMUNE AGGREGATES. SUBUNIT: C3 PRECURSOR IS FIRST PROCESSED BY THE REMOVAL OF 4 ARG RESIDUES, FORMING TWO CHAINS, BETA & ALPHA, LINKED BY A DISULFIDE BOND. C3 CONVERTASE ACTIVATES C3 BY CLEAVING THE ALPHA CHAIN, RELEASING C3A ANAPHYLATOXIN & GENERATING C3B (BETA CHAIN + ALPHA)

ITS PROCESSING BY C3 CONVERTASE IS THE CENTR COMPLEMENT SYSTEM. ITS PROCESSING BY C3 CONVERTASE IS THE CENTR REACTION IN BOTH CLASSICAL AND ALTERNATIVE COMPLEMENT PATHWAYS. AFTER ACTIVATION C3B CAN BIND COVALENTLY, VIA ITS REACTIVE THIOLESTER, TO CELL SURFACE CARBOHYDRATES OR IMMUNE AGGREGATES. FUNCTION: DERIVED FROM PROTEOLYTIC DEGRADATION OF COMPLEMENT C3 C1A ANAPHYLATOXIN IS A MEDIATOR OF LOCAL INFLAMMATORY PROCESS. INCREASES VASCULAR DERMEABILITY AND CAUSES HISTAMINE RELEASE FROM MAST CELLS AND DERMEABILITY AND CAUSES HISTAMINE RELEASE FROM MAST CELLS AND

AT The structure of an alternate form of complement C3 that displays are costimulatory growth factor activity for B lymphocytes.";

AJ Exp. Med. 180:2079-2088(1994).

C1- FUNCTION: C3 PLAYS A CENTRAL ROLE IN THE ACTIVATION OF THE COMPLEMENT SYSTEM. ITS PROCESSING BY C3 CONVERTASE IS THE CENTRAL COMPLEMENT SYSTEM. ITS PROCESSING BY C3 CONVERTASE IS THE CENTRAL COMPLEMENT IN BOTH CLASSICAL AND ALTERNATIVE COMPLEMENT PATHWAYS.

C2 RAFTER ACTIVATION C3B CAN BIND COVALENTLY, VIA ITS REACTIVE THOOLESTER, TO CELL SURFACE CARBOHYDRATES OR IMMUNE AGGREGATES.

C3C AFTER ACTIVATION C3B CAN BIND COVALENTLY USA ITS REACTIVE TO COMPLEMENT C3,

C3C THOUCION: DERIVED FROM PROTEOLYTIC DEGRADATION OF COMPLEMENT C3,

C3C C3A ANAPHYLATOXIN IS A MEDIATOR OF LOCAL INFLAMMATORY PROCESS. IT INDUCES THE CONTRACTION OF SMOOTH MUSCLE, INCREASES VASCULAR PROMEMBALILITY AND CAUSES HISTAMINE RELEASE FROM MAST CELLS AND BASOPHILIC LEUKOCYTES. THE SHORT ISOFORM HAS B-CELL STIMULATORY

SUBUNIT: C3 precursor is first processed by the removal of 4 Arg residues, forming two chains, beta and alpha, linked by a disulfide bond. C3 convertase activates C3 by cleaving the alpha chain, releasing C3A anaphylatoxin and generating C3B (beta chain + alpha' chain).
                                                                                                      MISCELLANEOUS:

ITS PROCESSING BY C3 CONVERTASE IS THE CENTRAL REACTION IN BOTH CLASSICAL AND ALTERNATIVE COMPLEMENT PATHWAYS. AFTER ACTIVATION C3B CAN BIND COVALENTLY, VIA ITS REACTIVE THIOLESTER, TO CELL SURFACE CARBOHYDRATES OR IMMUNE AGGREGATES.
-!- FUNCTION: DERIVED FROM PROTEOLYTIC DEGRADATION OF COMPLEMENT C3, C3A ANADHYLATOXIN IS A MEDIATOR OF LOCAL INFLAMMATORY PROCESS. IT INDUCES THE CONTRACTION OF SMOOTH MUSCLE, INCREASES VASCULAR PERMEABILITY AND CAUSES HISTAMINE RELEASE FROM MAST CELLS AND BASOPHILIC LEUKOCYTES.
-!- SUBUNIT: C3 PRECURSOR IS FIRST PROCESSED BY THE REMOVAL OF 4 ARG RESIDUES, FORMING TWO CHAINS, BETA & ALPHA, LINKED BY A DISULFIDE BOND. C3 CONVERTASE ACTIVATES C3 BY CLEAVING THE ALPHA CHAIN, CHAIN,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Identification and alignment of a thiol este component of guinea pig complement."; Biochemistry 22:942-947(1983).

-I- FUNCTION: C3 PLAYS A CENTRAL ROLE IN THE COMPLEMENT SYSTEM. ITS PROCESSING BY C3 COMPLEMENT SYSTEM.
                                                                                                                                                                                                                                                                                                                                              between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE=83178889;

SINGLE-STRANDED DNA, THE HYDROLYSIS OF ATP IN THE PRESENCE OF SINGLE-STRANDED DNA, AND THE ATP-DEPENDENT HYBRIDIZATION OF DNA BY DUPLEX DNA, AND THE ATP-DEPENDENT HYBRIDIZATION OF HOMOLOGOUS SINGLE-STRANDED DNAS. IT INTERACTS WITH LEXA CAUSING ITS ACTIVATION AND LEADING TO ITS AUTOCATALYTIC CLEAVAGE.

-!- FUNCTION: PI-MTUI IS AN ENDONUCLEASE.

-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-!- SUBCELLULAR LOCATION CYTOPLASMIC (BY SIMILARITY).

-!- PTM: THIS PROTEIN UNDERGOES A PROTEIN SELF SPLICING THAT INVOLVES A POST-TRANSLATIONAL EXCISION OF THE INTERVENING REGION (INTEIN)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a mechanism

THE SHORT ISOFORM MAY BE SECRETED.

SHORT ISOFORM MAY BE SECRETED.

ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM/CHD2-52 (SHOWN HERE)
AND A SHORT FORM/CHD2-42; ARE PRODUCED BY ALTERNATIVE SPLICING.
AND A SHORT FORM/CHD2-42; PRIMARILY EXPRESSED IN BRAIN.

TISSUE SPECIFICITY: PRIMARILY EXPRESSED IN BRAIN.

SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY.

SIMILARITY: CONTAINS 6 FIBRONECTIN TYPE III-LIKE DOMAINS.
